COVID-19 vaccine

April 24 update
The CDC and FDA have lifted a pause of the Johnson & Johnson (J&J) vaccine for all people age 18 and older, and use of the vaccine can resume in the U.S.

Use of the J&J vaccine was paused on April 13, 2021 as the CDC reviewed reports of a very rare syndrome with unusual blood clots identified in women ages 18 to 49. After a thorough review of the data, the CDC determined that the risk of this rare syndrome is very low. In contrast, the risk of hospitalization and death from COVID-19 is much higher.

If you received the J&J vaccine, your risk of any complication is extremely low. More information is coming soon as we update our website and print resources.

Why WA state paused the J&J vaccine (WA DOH)

April 15 update:

As of April 15, everyone in Washington age 16 and older is eligible for COVID-19 vaccination.

Please see "How to get vaccinated" for appointment scheduling options, including at King County Vaccination Partnership sites in Auburn, Kent, Redmond, and Seattle.
